SLOW URBANISM

IRENE LUQUE MARTIN MVRDV, Rotterdam

How to deal with rapid urbanization processes at the same time than understanding the consequences on the most vulnerable population? How do we balance the demand for slow processes to understand complex issues in cities? Through the lecture we will see a wide range of projects that had different scope, approach, and speed. Through these examples we will be able to reflect how speed in our methods and processes make a big difference in our results.
