architecture unlocks nature

European Research Conference on Design and Ecological Transition

Architecture Unlocks Nature is an international conference that will take place on January 24, 25 and 26, 2024 at the Politecnico di Milano.
This conference aims to gather contributions from European researchers and Ph.D. candidates interested in exploring how different viewpoints in architecture address the ecological transition.
By exploring both theory and practice, the intent is to provide a European overview of the field of design and the various standpoints in academic research today.
